Reid Moran began botanizing the world when he was very young and had a back-yard *Dudleya* collection when no more than ten years old. He did his undergraduate work at Stanford and then went on to Cornell to work on *Dudleya* with Jens Clausen. This was in the early 40s, when some war or another broke out, and Reid joined two of his cohorts as enlistees in the airforce. They ended up in the 15th Airforce flying raids over Yugoslavia. In a stroke of luck, neither good nor bad, Reid got zapped in mission no. 1 and was found by some of Tito's partisans tangled in the top of a tree he was trying to identify. After a lengthy walk he made his way back to safety in Italy and finally flew back to the USA. It should be noted, though, that the return flight was mysteriously routed through a number of North African bases, at each of which Reid managed to nab a few specimens. When discovered back at Cornell, he was in the herbarium pressing some of his acquisitions—in full uniform. His well-known, unique sense of humor has affected many of his colleagues, and the noteworthy collection section of this journal has never fully recovered from his famous “I found it there then” contribution.

He finished his PhD at Berkeley with Lincoln Constance and after a brief time as a UC extension instructor, moved to the San Diego Museum of Natural History.

Reid is certainly one of the finest field botanists in the West (*sensu lato*), and his knowledge of the northwest Baja California flora and that of the islands is unparalleled. We take great pleasure in dedicating volume 30 to him.
